FOR IMMEDIATE RELEASE

Sleep HealthCenters to Partner with Roadside Medical

Boston, MA—November 10, 2010 Sleep HealthCenters has entered into an agreement with Roadside Medical Clinic + Lab to provide sleep medicine services as part of Roadside Medical's industry-leading Driver Wellness programs.

Designed to enhance roadway safety by improving the health of commercial drivers, Roadside Medical Clinic + Lab provides cost-effective and professional medical services including DOT compliant physicals, drug testing, Driver Wellness Programs, and now sleep services in the most convenient locations for professional drivers—both on the highway and in company terminals. Sleep HealthCenters will support Roadside's sleep wellness program by providing education, professional diagnosis and treatment support, all incorporated into Roadside's overall Driver Wellness program.

"You cannot effectively screen, test and treat sleep apnea without addressing and improving drivers' overall health condition, such as weight, BMI, stress and cardiac strength. By providing continuous care for drivers for sleep, fitness, health and DOT compliance from the terminal to the highways—Roadside Medical is able to move the needle towards better driver health," said Rob Scheschareg, chief operating officer of Roadside Medical Clinic + Lab. "And once the needle starts moving, our clients see an improvement in recruitment, safety, and healthcare spending ROI."

The Federal Motor Carrier Safety Administration (FMCSA) has publicly announced a focus on fatigue in commercial drivers, specifically addressing the potential impact of sleep apnea. Regulations surrounding these issues are possible. With over 10 million drivers on the road, transportation companies are taking steps to ensure their drivers receive not only the care they need but in ways and locations that make sense to a driver's lifestyle.

"From our own estimates, almost three out of 10 truck drivers currently suffer from mild to severe sleep apnea. And we know from our research that drivers with severe sleep apnea are known to be at a

much, much greater risk of being involved in a severe crash,” said Anne S. Ferro, FMCSA Administrator, at the Sleep Apnea and Trucking Conference held in Baltimore this past May.

“Healthy sleep is vital to employee wellness and safety, but for trucking companies, it can be difficult to implement a program for employees who live in different places, are constantly moving around the country, have different primary care physicians and maybe even different health insurance coverage,” says Dr. Lawrence Epstein, Chief Medical Officer at Sleep HealthCenters, based in Brighton, Massachusetts.

“Sleep HealthCenters' organization of SleepPartners, a network of highly qualified sleep providers, is available to care for Roadside drivers around the country while supporting Roadside’s sleep wellness program by expediting sleep apnea diagnosis, treatment and follow-up care,” Sleep HealthCenters’ CEO Paul Valentine says. “In addition, our proprietary web-based system called PAPCenter, allows us to monitor each driver’s sleep apnea device utilization even though they may see different therapists while they are on the road in different states.”

Sleep HealthCenters, based in Massachusetts, has a system of comprehensive sleep medicine centers and clinics. The company currently runs 26 facilities in Arizona, Connecticut, Massachusetts and Rhode Island and is affiliated with academic medical institutions such as Brigham and Women’s Hospital and Beth Israel Deaconess Medical Center, both in Boston.

Roadside Medical LLC is based in Sarasota, FL and manages a nationwide network of health clinics located at Pilot Travel Centers, and provides DOT certification exams and drug testing, sleep services, convenient medical care, driver wellness programs, and in-terminal facilities for commercial drivers and trucking companies.
